Formation recovery v3: faster fresh-data recovery, unchanged blind braking
3 independent Python seed clusters per stage; 1 native seed; no physical-safety/string-stability claim
Held-out recovery: both followers within 1 m
Mean settling time after event (s)
baseline
damped
Dual blackout
Cut-out
Fixed example: seed 7101, 12 m/s
Maximum follower absolute gap error (m)
Sensor blackout
Simulation time (s)
Longer observation does not dilute this score
First-20-second spacing RMS (m)
nominal
leader brake
v2v blackout
radar blackout
dual blackout
loss jitter
ego blackout
cut in
Native factorial: cap correction is a separate effect
Native final-5-second RMS (m)
nominal
dual blackout
Old gains old cap
New gains old cap
Old gains recovery cap
New gains recovery cap
